

SMARTER WAYS TO WORK

FINN Additive System™ TackPlus

TACKPLUS

DESCRIPTION

FINN TackPlus is a combination of Finn Tackifier and Finn FiberPlus; specially blended to provide both physical bonding of fibers and tackifier characteristics. TackPlus works great with any hydraulic mulch fiber material and disperses thoroughly in water. TackPlus uses the glue-like bonding of Finn Tackifier along with the mechanical bonding of FiberPlus to help thicken and hold fiber mulch in place even on the steepest of slopes. When added to fiber mulch, TackPlus creates a stabilized fiber matrix material at a fraction of the cost compared to other spray-on erosion control products. TackPlus can be metered in with existing mulch material at rates appropriate for the specific job site conditions giving you a fluffy mulch mat which allows oxygen and moisture to reach the soil, along with slow degradation providing long lasting stabilization. Finn TackPlus is an excellent high performance tackifier and the key ingredient in creating a stabilized fiber matrix.

APPLICATION & RATES

- FIBER MULCH TACKING NORMAL SLOPES.....34 LBS. PER ACRE
- FIBER MULCH TACKING MODERATE SLOPES.....102 LBS. PER ACRE
- FIBER MULCH TACKING SEVERE SLOPES.....136 LBS. PER ACRE
